Introduction

Preface

The Department of Workforce Services (DWS), using data collected by the Occupational Employment Statistics (OES) survey, produces this publication. The DWS would like to thank the employers who took the time to supply the information requested in this survey. Without their cooperation this booklet would not have been possible.

The OES survey is a semiannual survey measuring occupational employment and wage rates for full and part-time wage and salary workers in nonfarm industries. The survey does not cover the self-employed, owners and partners in unincorporated firms, household workers, or unpaid family workers.

The Arkansas OES program samples and contacts establishments in May and November of each year and, over three years, contacts approximately 18,000 establishments. The statewide response rate for the May 2018 panel was 75 percent for establishments, covering 68 percent of employment.

Occupational Coding System

The OES survey categorizes workers into 821 detailed occupations based on the 2010 Office of Management and Budget's Standard Occupational Classification (SOC) system. Together, these detailed occupations make up 22 of the 23 SOC major occupational groups. Major group 55, Military Specific Occupations, is not included.

For more information about the SOC system, please see the BLS website at www.bls.gov/soc/.

Concepts

Occupational employment is the estimate of total wage and salary employment in an occupation. The OES survey defines employment as the number of workers who can be classified as full- or part-time employees, including workers on paid vacations or other types of paid leave; workers on unpaid short-term absences; salaried officers, executives, and staff members of incorporated firms; employees tempo-

rarily assigned to other units; and employees for whom the reporting unit is their permanent duty station, regardless of whether that unit prepares their paycheck.

Wages for the OES survey are straight-time, gross pay, exclusive of premium pay. Base rate; cost-of-living allowances; guaranteed pay; hazardous-duty pay; incentive pay, including commissions and production bonuses; and tips are included. Excluded are overtime pay, severance pay, shift differentials, non-production bonuses, employer cost for supplementary benefits, and tuition reimbursements.

The OES survey collects most of its wage data in 12 intervals. For each occupation, respondents are asked to report the number of employees paid within specific wage intervals. The intervals are defined both as hourly rates and the corresponding annual rates, where the annual rate for an occupation is calculated by multiplying the hourly wage rate by a typical work year of 2,080 hours. The responding establishments are instructed to report the hourly rate for part-time workers, and to report annual rates for occupations that are typically paid at an annual rate but do not work 2,080 hours per year, such as teachers, pilots, and flight attendants. Other workers, such as some entertainment workers, are paid hourly rates, but generally do not work 40 hours per week, year round. For these workers, only an hourly wage is reported.

Estimation Methodology

The OES survey is designed to produce estimates by combining six panels of data collected over a 3-year period. These estimates were produced by combining November 2015, May and November 2016, May and November 2017, and May 2018 surveys.

Wage updating. Significant reductions in sampling errors are obtained by combining six panels of data, particularly for small geographic areas and occupations. Wages for the current panel need no adjustment. However, wages in the five previous panels need to be updated to the current panel's reference period.

The OES program uses the BLS Employment Cost Index

(ECI) to adjust survey data from prior panels before combining them with the current panel's data. The wage updating procedure adjusts each detailed occupation's wage rate, as measured in the earlier panel, according to the average movement of its broader occupational division.

Imputation. There are always establishments that do not respond for a given panel. A "nearest neighbor" hot deck imputation procedure is used to impute missing occupational employment totals. A variant of mean imputation is used to impute missing wage distributions. In some cases, data for current panel nonrespondents are available from earlier panels. In those cases, the older data may be used and aged to represent the current reference period.

Weighting and benchmarking. The sampled establishments are weighted to represent all establishments for the reference period. Weights are further adjusted by the ratio of employment totals (the average of November 2017 and May 2018 employment) from the Bureau of Labor Statistics Quarterly Census of Employment and Wages to employment totals from the OES survey.

How to Use the Data

The following are some examples of useful applications of occupational employment and wage data:

- Detailed occupational data are used by job seekers or employers to show wages for workers in certain occupations and to assess wage variation within, and across, occupations. Wage variation within an occupation can result from several factors, including industry, geographic location, or a worker's particular experience or qualifications. Useful data for job seekers include information on the industries or geographic areas that have the highest employment or the highest average wages for an occupation. Career and guidance counselors use OES data to examine possible occupational choices by field of study or training.
- Human Resources professionals use industry specific occupational data in salary negotiations or to ensure that their wages are competitive with those of other businesses in their area or industry. Information on the types of jobs within an industry can be used to compare average

staffing patterns with that of one's own company. Occupational employment by industry may be useful in assessing the impact of shifts in technology and other macroeconomic trends on the types of jobs available. The State's employment projections programs use this data as an input to their employment projections, to predict training and education demands.

- Geographic area information is used to assess labor market features of a particular area. State level data can be used to make assessments about the diversity of a State's economy or to make comparisons among States. The occupational composition of employment can provide clues to how a State or regional economy can hold up in adverse conditions that affect a certain sector of the economy. Differences in both occupational composition and occupational wage rates also help explain differences in average wages across States. For example, States with high average wages may have larger employment shares of high paying occupations, higher wages within each occupation, or some combination of both factors.

- Like State data, metropolitan area data can be used to study the diversity of local area economies. Businesses can use data to see whether it might be beneficial to relocate to a particular area. Occupational employment data may indicate whether workers are available in occupations that the business will need. For example, businesses that require computer specialists or skilled production workers may want to identify areas that have high employment in these occupations. Businesses may also use the data to compare wages between alternative areas.

Definition of Metropolitan Statistical Areas (MSAs)

In addition to statewide estimates, this publication provides employment and wage estimates for each of the eight Metropolitan Statistical Areas (MSAs) in Arkansas. An MSA is a county or aggregation of counties that have one or more central cities and that meet specified criteria of population, population density, commuting patterns, and social and economic integration. They are defined as follows:

Fayetteville-Springdale-Rogers, AR-MO MSA

Benton, Madison & Washington Counties, AR
McDonald County, MO

Hot Springs, AR MSA

Garland County

Little Rock-North Little Rock-Conway, AR MSA

Faulkner, Grant, Lonoke, Perry, Pulaski & Saline Counties

Memphis, TN-AR-MS MSA

Crittenden County, AR
DeSoto, Marshall, Tate & Tunica Counties, MS
Fayette, Shelby, & Tipton Counties, TN

Fort Smith, AR-OK MSA

Crawford, Franklin & Sebastian Counties, AR
LeFlore & Sequoyah Counties, OK

Jonesboro, AR MSA

Craighead & Poinsett Counties

Pine Bluff, AR MSA

Cleveland, Jefferson & Lincoln Counties

Texarkana, TX-AR MSA

Miller County, AR
Bowie County, TX

Data on the Web

This publication may be downloaded in its entirety from the Discover Arkansas Labor Market Information web site at www.discover.arkansas.gov. Click on the Publications link across the top navigation bar and look under Current Publications. The file is available in PDF format and viewable in Adobe Acrobat Reader.

In addition to this PDF file, employment and wage data tables are available to download as .xlsx files using the Data Search portion of the web site. The same statewide and metropolitan areas from the print version are represented, as well as Arkansas' ten local workforce development areas.

State Analysis

This report uses the Standard Occupational Classification (SOC) system to classify workers into one of nearly 800 detailed occupations. Together, these detailed occupations make up 22 major occupational groups.

Employment and Wages in Arkansas by Occupational Group, May 2018

Software Developers, Systems Software	1,334	\$41.27
Industrial Engineers	1,247	\$37.07
Actuaries	89	\$42.18

*STEM = Science, Technology, Engineering, Mathematics

- All of the STEM occupations listed above pay more than the Arkansas average for all occupations.
- These STEM occupations above pay an average of \$37.59 per hour.

Figure 8 - Wage Distribution for Nursing Occupations, May 2018

Nursing Assistants (percentile)					
	10th	25th	50th (median)	75th	90th

Annual	\$42,770	\$50,060	\$59,650	\$71,090	\$80,530

- The average registered nurse earns above the Arkansas mean hourly wage of \$19.97, while the average licensed practical nurse and nursing assistant earn below.
- The average registered nurse earns 52.26% more than the average licensed practical nurse and 142.43% more than the average nursing assistant.

Employment and Wage Tables

How to Read the Tables

For each occupation in the tables of this publication, the following elements are identified:

Geographic Area. Employment and wage estimates are produced for the state and each of Arkansas' eight Metropolitan Statistical Areas (MSAs).

SOC Code. The Standard Occupation Code (SOC) is a six-digit code designed to define occupations uniformly and to organize occupational data logically. For more information on the SOC, please visit: <http://www.bls.gov/soc/home.htm>.

Estimated Employment. The employment figure is the estimate of total wage and salary employment in an occupation across the industries in which that occupation was reported. The OES survey defines employment as the number of workers who can be classified as full-time or part-time employees, including workers on paid vacations or other types of leave; workers on unpaid short-term absences; salaried officers, executives, and staff members of incorporated firms; employees temporarily assigned to other units; and employees for whom the reporting unit is their permanent duty station regardless of whether that unit prepares their paycheck.

The data in this column is rounded.

Entry Wage. The entry wage is defined as the mean (average) of the first third of the wage distribution within each of the occupations.

Mean (average) Wage. The mean wage is the total wages that all workers in the occupation earn divided by the total employment of the occupation.

Median Wage. The median wage is the wage where 50 percent of all workers earn that amount or less and where 50 percent of all workers earn that amount or more.

Experienced (Exp.) Wage. The experienced wage is defined as the mean (average) of the upper two-thirds of the wage distribution within each of the occupations.

NA - Indicates that the data is not available because of confidentiality or lack of data.

Entry/Experienced Wages: The OES survey does not collect information on whether workers are entry level or experienced; work experience or tenure; or any other information about job levels or rank. Therefore, these estimates are not a product of the OES program or the BLS Federal/State cooperative effort.
